DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 10/13/2005 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Kestenbaum (Reg. No. 20,430) on 12/22/2005.

The application has been amended as follows:

14. (Currently Amended) Binoculars with a rotary element (15), by the actuation of which axially displaceable lenses (14) are displaced for focusing[(15)]; wherein ~~the~~ a rotary movement introduced by the rotary element (15) is converted into a second rotary movement

with a greater rotation angle by means of a gear transmission stage (16)[[,]]; wherein the gear transmission stage (16) comprises a sun wheel (29) which is arranged coaxial to a hinge shaft (9) and which is connected to the rotary element (15) via an internally and externally toothed ring (21), ~~with a rotary element, by the actuation of which axially displaceable lenses are displaced for focusing;~~ and wherein a central adjustment shaft (35) is provided which executes, on actuation of the rotary element (15), an axial movement which corresponds to the axial movement displacement of the lenses (14), ~~with the sun wheel (29) being arranged coaxial to a hinge shaft (9).~~

Allowable Subject Matter

Claims 2-19 are allowed (and have been renumbered 1-18).

The following is a statement of reasons for the indication of allowable subject matter:

Though the prior art discloses binoculars with a rotary element, by the actuation of which axially displaceable lenses are displaced for focusing; wherein a rotary movement introduced by the rotary element is converted into a second rotary movement with a greater rotation angle by means of a gear transmission stage; wherein the gear transmission stage comprises a sun wheel; and wherein a central adjustment shaft is provided which executes, on actuation of the rotary element, an axial movement which corresponds to the axial displacement of the lenses, the prior art of record fails to teach or suggest the aforementioned combination further comprising a sun wheel which is arranged coaxial to a hinge shaft and which is connected to the rotary element via an internally and externally toothed ring. Though transmission stages are known that include sun wheels connected to a rotary element via an internally and externally toothed ring in, for

example, the automotive field, it does not appear that one of ordinary skill would be motivated to look to such a field or be able to modify such an arrangement for use with a binocular focusing system at the time the invention was made.

With respect to claims 2-13 and 15-19, these claims depend on claim 14 and are allowable at least for the reasons stated supra.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
